The e-Log Monitoring System of CPSP will improve monitoring and has the potential to enhance the standard of Training

Prof. Khalid Masood Gondal, DGIR CPSP, addressing the participants of a supervisory workshop held at Regional Centre Lahore said that CPSP e-Log monitoring system will enable the supervisors of different specialities to assess the under-training doctors.

This will help in monitoring the trainings of doctors on daily basis. He further said that with the introduction of E-log system, the communication gap between supervisors and trainees will also be reduced which is an appreciable step.

Prof. Khalid Masood Gondal said the developed countries are also going to copy CPSP e-log system and CPSP will provide guidance to these countries. Notices will be issued to those supervisors who have not logged on for the last six months through e-mail so that they can use e-log on regular basis.

CPSP has made the use of e-log compulsory from July 2011. So far, 5201 trainees have been logged on out of 5948 whereas 1096 supervisors have been logged on out of 1507, which is comparatively less.

The participants of supervisory workshop appreciated the e-log system and said that this electronic system is the top priority of time and the need of the hour. Pakistan has started this system and other countries are following it and seeking guidance in this regard for which negotiations are underway.
